# State code 18: Constructing or raising waterway barrier works in fish habitats

## 18.1 Purpose statement

The purpose of the code is to ensure that development involving the constructing or raising of **waterway barrier works** in a **fish habitat**:

- 1. maintains **fish** movement and connectivity throughout **waterways** and within and between **fish habitats**
- 2. maintains the health and productivity of fisheries resources and fish habitat
- 3. maintains the community and fishing sectors' use of the area and access to fisheries resources
- 4. only occurs only where there is a need for the development and no other reasonable alternative exists
- 5. provides adequate **fish** passage including a **fish way**, if necessary
- 6. avoids impacts on marine plants, waterways that provide for fish passage and declared fish habitat areas that are matters of state environmental significance, and where avoidance is not reasonably possible, minimises and mitigates impacts, and provides an offset for significant residual impacts where appropriate.

Note: For guidance on how to determine whether this code applies to development, see fact sheets:

- 1. Maintaining Fish Passage in Queensland: What is a waterway, Department of Agriculture, Fisheries and Forestry, 2014
- 2. Maintaining Fish Passage in Queensland: What is a waterway barrier work, Department of Agriculture, Fisheries and Forestry, 2014
- 3. Maintaining Fish Passage in Queensland: What is not a waterway barrier work, Department of Agriculture, Fisheries and Forestry, 2014.

## 18.2 Performance outcomes and acceptable outcomes

Development that is operational work for constructing or raising **waterway barrier works** in **fish habitats** should demonstrate compliance with the relevant provisions of table 18.2.2. For further details of the specific performance outcomes to be addressed, please refer to table 18.2.1.

Table 18.2.1: Development type and relevant provisions of the code

Development	Relevant provisions of code
All development	Table 18.2.2 – PO1 – PO18
Development involving fish ways	Table 18.2.2 – PO19 – PO28
Development involving floodgates	Table 18.2.2 – PO29 – PO31
Temporary waterway barrier works	Table 18.2.2 – PO32 – PO35
Matters of state environmental significance	Table 18.2.2 – PO36

Table 18.2.2: Operational work

Performance outcomes	Acceptable outcomes
All development	
<b>PO1</b> There is a demonstrated need for the development and alternatives (locations and designs) which do not involve constructing or raising <b>waterway barrier works</b> are not viable.	No acceptable outcome is prescribed.
<b>PO2</b> Development has a functional requirement to be located within a <b>waterway</b> . Ancillary elements of development occur	No acceptable outcome is prescribed.

Performance outcomes	Acceptable outcomes
outside the waterway.	
Note: Bed and banks of the <b>waterway</b> and any associated wetlands and riparian areas within the development site should be accurately identified on plans provided with the application, together with the location of highest astronomical tide, mean high water spring and mean low water spring tide heights if the <b>waterway</b> is tidal.	
<b>PO3</b> The number and extent of <b>waterway barrier works</b> and the spatial and temporal extent of their impacts on <b>waterways</b> providing for <b>fish</b> passage are minimised.	No acceptable outcome is prescribed.
<b>PO4</b> For the life of the barrier, adequate <b>fish</b> passage must	For all crossings:
be provided and maintained at all waterway barrier works	
through:	AO4.1 Hydraulic conditions (depth, velocities and turbulence) from the downstream to the upstream limit of the structure
<ol> <li>fish way(s) that adequately provide for the movement of fish; or</li> <li>the movement of fish is adequately provided for in</li> </ol>	allow for <b>fish</b> passage of all <b>fish</b> attempting to move through the crossing at all flows up to the <b>drownout</b> of the structure.
another way.	AND
	AO4.2 For the life of the crossing, the relative levels of:
	a bed level crossing or a culvert invert
	bed erosion protection     apron scour protection; and
	the stream bed are maintained to avoid drops in elevation at their joins.
	AND
	AO4.3 The crossing and associated erosion protection structures are installed at no steeper gradient than the waterway bed gradient.
	AND
	AO4.4 The crossing and associated erosion protection structures are roughened throughout to approximately simulate natural bed conditions.  AND
	AO4.5 Design and maintenance measures are in place for the life of the crossing to keep crossings clear of blockages through a regular inspection program in order to retain <b>fish</b> passage through the crossing.
	AND
	For waterway crossings other than bridges and culverts:
	AO4.6 The crossing is built at or below bed level so that the surface of the crossing is no higher than the stream bed at the site.
	AND
	AO4.7 The lowest point of the crossing is installed at the level of the lowest point of the natural stream bed (preconstruction), within the footprint of the proposed crossing.
	AND
	AO4.8 There is a height difference between the lowest point of the crossing and the edges of the low flow section of the crossing so that water is channelled into the low flow section of the crossing.

Performance outcomes	Acceptable outcomes
	AND
	<b>AO4.9</b> The level of the remainder of the crossing is no higher than the lowest point of the natural stream bed outside of the low flow channel.
	AND
	For bridges:
	AO4.10 Bridge support piles are not constructed within the low-flow channel and do not constrict the edges of the low-flow channel, and the number of piles in-stream are minimised.
	AND
	AO4.11 Bridge abutments and bank revetment works do not extend into the waterway beyond the toes of the banks.
	AND
	<b>AO4.12</b> Suitable <b>fish habitats</b> are maintained within the low-flow channel.
	AND
	For culverts:
	AO4.13 Culverts are only installed where the site conditions do not allow for a bridge.
	AND
	AO4.14 The combined width of the culvert cell apertures are equal to 100 percent of the main channel width.
	AND
	AO4.15 The base of the culvert incorporates a low flow channel consistent with the natural low flow channel and:
	<ol> <li>is buried a minimum of 300 millimetres to allow bed material to deposit and reform the natural bed on top of the culvert base; or</li> <li>the base of the culvert is the stream bed; or</li> <li>the base of the culvert cell and any instream scour protection is roughened throughout to approximately simulate natural bed conditions.</li> </ol>
	AND
	AO4.16 The outermost culvert cells incorporate roughening elements such as baffles on their bankside sidewalls.
	AND
	<b>AO4.17</b> Roughening elements are installed on the upstream wingwalls on both banks to the height of the upstream obvert or the full height of the wingwall.
	AND
	1

Performance outcomes	Acceptable outcomes
	AO4.18 Roughening elements provide a contiguous lower velocity zone (no greater than 0.3 metres/second) for at least 100 millimetres width from the wall through the length of the culvert and wingwalls.
	AND
	AO4.19 Culvert alignment to the stream flow minimises water turbulence.
	AND
	<b>AO4.20</b> There is sufficient light at the entrance to and through the culvert so that <b>fish</b> are not discouraged by a sudden darkness.
	AND
	AO4.21 The depth of cover above the culvert is as low as structurally possible, except where culverts have an average recurrence interval (ARI) greater than 50 years.
	AND
	AO4.22 For culvert crossings designed with a flood immunity ARI greater than 50 years, <b>fish</b> passage is provided up to culvert capacity.
	For all other development no acceptable outcome is prescribed.
PO5 Waterway barrier works are designed, constructed, operated and maintained to provide lateral and longitudinal fish passage for all members of the fish community, regardless of size, species, life-stage or swimming ability, and accommodating future and seasonal increases in fish biomass.	No acceptable outcome is prescribed.
Note: In order to demonstrate compliance with this performance outcome, the seasonal and flow related biomass of the fish community at the location of the proposed waterway barrier works will need to be surveyed and addressed in the design of the fish way by a person suitably qualified and experienced in fish passage biology. In addition, any future increases in fish biomass should be quantified and catered for.	
Longitudinal <b>fish</b> passage refers to the movement into both permanent and temporary offstream systems, including wetlands, lagoons, floodplain etc. Fragmentation of connectivity into and out of these systems must be mitigated via adequate <b>fish</b> passage.	
PO6 Development is designed and operated so that all components of waterway barrier works (for example scour protection, intake and outlet structures, spillway, stilling basin, apron and dissipation structures) and all pathways of potential fish movement provide safe fish passage. Stepped spillways (including sheet pile weirs) are not acceptable.	No acceptable outcome is prescribed.
Note: Stepped spillway (including sheet pile weirs) have been associated with high mortalities and injuries to <b>fish</b> .	
Assessment of this performance outcome will include consideration of adequate tailwater depth at the toe of the spillway (for example: stilling basin) at commencement to spill (for example: 30 percent of the head difference).	
<b>PO7</b> The <b>drownout</b> characteristics of the <b>waterway barrier works</b> and the frequency, timing and duration of <b>drownout</b>	No acceptable outcome is prescribed.

	level; and
	2. 0.5 metres below minimum tail water level at the site.
PO21 Fish way maximises fish movement by providing:	No acceptable outcome is prescribed.
j	The state of the s
1. continuous attraction flows at the <b>fish way</b> entrance	
under all flow conditions within the <b>fish way's</b> operating	
range	
2. additional means of <b>fish</b> attraction are included in the	
fish way design if appropriate	
3. attraction flow velocities are sufficient and variable to	
attract the whole fish community, and expected future	
and seasonal biomass	
4. adequate holding chamber capacity for the expected	
fish biomass in any lock, lift, trap and transfer type fish	
ways	
5. adequate exit conditions for downstream <b>fish</b> passage;	
and	
6. for future adjustments in capacity or operation that may	
be needed once in place.	1

Performance outcomes	Acceptable outcomes
PO22 Fish ways are designed so that:	No acceptable outcome is prescribed.
	1.12 1.13 Sp. taa. 10 Sa. 10 Sp. 10 S
water intakes, outlets, screens and other structures do	
not cause entrainment, injury or mortality to <b>fish</b>	
appropriate light levels are maintained at entrances, exits and throughout the <b>fish way</b> to ensure successful	
use by <b>fish</b>	
3. <b>fish</b> attracted to the spillway or outlet flows are able to	
access the <b>fish way</b> without having to swim back	
downstream	
4. <b>fish</b> are able to exit upstream and downstream <b>fish ways</b> at a water levels over the full range of tailwater	
and headwater levels	
5. exits are located to avoid <b>fish</b> being washed back over	
the spillway during overtopping	
6. adequate hydraulic conditions and minimum water depth	
for <b>fish</b> passage is maintained throughout the <b>fish way</b> 7. predation on <b>fish</b> using the <b>fish way</b> is avoided	
8. rubbish and debris do not impede <b>fish</b> passage or cause	
blockages or damage the fish way	
9. delays in <b>fish</b> movement are avoided when <b>fish</b> are	
undertaking upstream spawning migrations; and	
10. delays in <b>fish</b> movement are avoided immediately after times when there have been flows in the system but no	
<b>fish</b> passage in the rising hydrograph.	
PO23 All water releases are directed through the fish way	No acceptable outcome is prescribed.
as a priority over the outlet works.	
PO24 All flows and releases initiate and terminate adjacent	No acceptable outcome is prescribed.
to the <b>fish way</b> or are directed parallel to the <b>fish way</b> entrance and all flows are transferred to the <b>fish way</b> as	
soon as possible during a flow recession.	
30011 do possible during a now recession.	
Note: Flows and releases include but are not limited to spillway	
overtopping and outlet flows. Such flows must not compete with <b>fish way</b> attraction flows or reduce the operation of a <b>fish way</b> .	
PO25 Mechanisms are in place to ensure that operational	No acceptable outcome is prescribed.
issues in <b>fish ways</b> are promptly rectified for the life of the	The acceptance contains to proceed acceptance.
fish way including but not limited to:	
all components are designed to be durable, reliable and adequately protected from damage during high flow and	
flood events	
all components can be replaced; and	
3. a contingency plan ensures provision of alternate	
adequate fish passage during the fish way re-	
instatement process.	
Note: <b>Fish way</b> downtime greater than 14 consecutive calendar	
days is likely to have a significant impact to fisheries resources.	
PO26 Development provides for:	No acceptable outcome is prescribed.
1 installation of monitoring equipment (such as trans and	
installation of monitoring equipment (such as traps and lifting equipment); and	
access for monitoring, maintenance and operational	
purposes.

are sourced from surface quality water or equivalent water	
quality.  PO28 Tailwater control structures such as a gauging weir,	No acceptable outcome is processived
rock bar or stream crossings are fitted with a <b>fish way</b> or	No acceptable outcome is prescribed.
designed to provide <b>fish</b> passage.	
Development involving floodgates	
PO29 Floodgates are designed and operated:	No acceptable outcome is prescribed.

Performance outcomes	Acceptable outcomes
to provide hydraulic conditions adequate for <b>fish</b> passage over an adequate duration of the tidal cycle;	
and	
as tidally activated, automatic floodgates.	
PO30 The invert of the floodgate is at bed level.	No acceptable outcome is prescribed.
PO31 The operation of the floodgate will not result in adverse	No acceptable outcome is prescribed.
impacts on water quality that may harm fish or fish habitat.  Temporary waterway barrier works	
PO32 The temporary waterway barrier works will exist only	AO32.1 The temporary waterway barrier work:
for a specified temporary period and provide for adequate	The temperary materialy same ment.
fish movement.	<ol> <li>is a partial barrier, or</li> <li>does not constrict the area or flows of a low flow channel.</li> </ol>
	AND one of the following acceptable outcomes apply
	AO32.2 The temporary structure is only in place outside of known fish spawning or migration periods.
	OR
	<b>AO32.3</b> The barrier is opened periodically every five days for at least 48 hours to allow <b>fish</b> movement and water exchange.
	OR
	AO32.4 Fish movement is provided for via a stream diversion.
<b>PO33</b> Temporary barriers are removed at the end of their design life, so that full movement for <b>fish</b> is reinstated and the bed and banks are returned to their original profile and stability.	No acceptable outcome is prescribed.
PO34 Where there are species, at the site of the temporary waterway barrier works that require downstream movement during works, provisions are made to allow those species to move downstream.	No acceptable outcome is prescribed.
<b>PO35</b> The condition and value of aquatic macrophytes and other <b>fish habitats</b> is maintained.	No acceptable outcome is prescribed.
Matters of state environmental significance	
PO36 Development:	No acceptable outcome is prescribed.
<ol> <li>avoids impacts on matters of state environmental significance; or</li> <li>minimises and mitigates impacts on matters of state environmental significance after demonstrating avoidance is not reasonably possible; and</li> <li>provides an offset if, after demonstrating all reasonable avoidance, minimisation and mitigation measures are undertaken, the development results in an acceptable significant residual impact on a matter of state environmental significance.</li> </ol>	
Statutory note: (3) only applies to development on Brisbane core port land within the area identified as E1 Conservation/Buffer, E2 Open Space or Buffer/Investigation in the Brisbane Port LUP precinct plan. For the Brisbane Port LUP, see <a href="https://www.portbris.com.au">www.portbris.com.au</a> .	
Note: For the purpose of this code, the matters of state environmental significance assessed are marine plants, waterways that provide for fish passage and declared fish habitat areas.	
Guidance for determining if the development will have a <b>significant</b> residual impact on the matter of state environmental	

Performance outcomes	Acceptable outcomes
significance is provided in the Significant Residual Impact	
Guideline, Department of State Development, Infrastructure and	
Planning, 2014. Where the significant residual impact is	
considered an acceptable impact on the matter of state	
environmental significance under the Environmental Offsets	
framework and an <b>offset</b> is considered appropriate, the <b>offset</b>	
should be delivered in accordance with the Environmental Offsets	
Act 2014.

## 18.4 Glossary of terms

**Declared fish habitat area** see the *Fisheries Act 1994*.

Note: **Declared fish habitat area** means an area that is declared under the *Fisheries Act 1994* to be a **fish habitat** area. Section 120 of the *Fisheries Act 1994* deals with declaration of **fish habitat** areas.

Disease see section 94 of the Fisheries Act 1994.

Note: Disease means:

- 1. a **disease**, parasite, pest, plant or other thing (the **disease**) that has, or may have, the effect (directly or indirectly) of killing or causing illness in **fisheries resources**, or in humans or animals that eat **fisheries resources** infected with or containing the **disease**
- 2. a chemical or antibiotic residue
- a fish or plant species that may compete against fisheries resources or other fisheries resources to the detriment of the fisheries resources or other fisheries resources.

**Drownout** means when the tailwater and headwater levels across a weir are essentially equal, velocities are sufficiently low at, or close to, the edge of the spillway crest and the weir is fully submerged to a sufficient depth to allow for **fish** passage and for the species and size-classes of **fish** moving through the site to cross the weir.

#### Fish see section 5 of the Fisheries Act 1994.

Note: Fish:

- 1. means an animal (whether living or dead) of a species that throughout its life cycle usually lives:
  - a. in water (whether freshwater or saltwater); or
  - b. in or on **foreshores**; or
  - c. in or on land under water
- 2. includes:
  - a. prawns, crayfish, rock lobsters, crabs and other crustaceans
  - b. scallops, oysters, pearl oysters and other molluscs
  - c. sponges, annelid worms, beche-de-mer and other holothurians
  - d. trochus and green snails
- 3. does not include:
  - a. crocodiles; or
  - b. protected animals under the Nature Conservation Act 1992; or
  - c. pests under the Pest Management Act 2001; or
  - d. animals prescribed under a regulation not to be fish
- also includes:
  - a. the spat, spawn and eggs of **fish**
  - b. any part of fish or spat, spawn or eggs of fish
  - c. treated fish, including treated spat, spawn and eggs of fish
  - d. coral, coral limestone, shell grit or star sand
  - e. freshwater or saltwater products declared under a regulation to be fish.

#### Fish habitat see the Fisheries Act 1994.

Note: Fish habitat includes land, waters and plants associated with the life cycle of fish, and includes land and waters not presently occupied by fisheries resources.

#### Fish way see the Fisheries Act 1994.

Note: Fish way means a fish ladder or another structure or device by which fish can pass through, by or over waterway barrier works.

#### **Fisheries resources** see the *Fisheries Act* 1994.

Note: Fisheries resources includes fish and marine plants.

#### Fishery see section 7 of the Fisheries Act 1994.

Note: Fishery means activity by way of fishing, for example, activities specified by reference to all or any of the following:

- 1. a species of fish
- 2. a type of fish by reference to sex, size or age or another characteristic
- 3. an area
- 4. a way of fishing
- 5. a type of boat
- 6. a class of person
- 7. the purpose of an activity
- 8. the effect of the activity on a fish habitat, whether or not the activity involves fishing
- 9. anything else prescribed under a regulation.

#### Fishing see the Fisheries Act 1994.

Note: Fishing includes:

- 1. searching for, or taking, fish
- 2. attempting to search for, or take, fish
- 3. engaging in other activities that can reasonably be expected to result in the locating, or taking, of fish
- 4. landing **fish** (from a boat or in another way), bringing **fish** ashore or transhipping **fish**.

#### Foreshore see the Fisheries Act 1994.

Note: Foreshore means parts of the banks, beds, reefs, shoals, shore and other land between high water and low water.

#### Legally secured offset area see the Environmental Offsets Act 2014.

Note: An area of land is a legally secured offset area if:

- 1. the area is:
  - a. an environmental offset protection area; or
  - b. an area declared as an area of high nature conservation value under section 19F of the Vegetation Management Act 1999; or
  - c. another area prescribed under a regulation; and
- 2. under the *Environmental Offsets Act 2014* or another Act, the area is subject to a delivery or management plan or agreement (however described in this Act or the other Act) to achieve a conservation outcome for a **prescribed environmental matter**.

**Main channel** means the active component of the flow channel of a **waterway** characterised by a distinct change in appearance or structure at the upper limit of the channel (refer to accepted development requirements for examples).

#### Marine plant see section 8 of the Fisheries Act 1994.

Note: Marine plant includes the following:

- 1. a plant (a tidal plant) that usually grows on, or adjacent to, tidal land, whether it is living, dead, standing or fallen
- 2. material of a tidal plant, or other plant material on tidal land
- 3. a plant, or material of a plant, prescribed under a regulation or management plan to be a marine plant.

A marine plant does not include a plant that is a declared pest under the Land Protection (Pest and Stock Route Management) Act 2002.

## **Matters of state environmental significance** (MSES) see schedule 2 of the Environmental Offsets Regulation 2014.

Note: Matters of state environmental significance are prescribed environmental matters under the Environmental Offsets Regulation 2014 that require an offset when a prescribed activity will have a significant residual impact on the matter. A matter of state environmental significance is any of the following matters:

1. regional ecosystems under the Vegetation Management Act 1999 that:

- a. are endangered regional ecosystems
- b. are of concern regional ecosystems
- c. intersect with a wetland shown on the vegetation management wetlands map
- d. contain areas of essential habitat shown on the essential habitat map for an animal that is endangered wildlife or vulnerable wildlife or a plant that is endangered wildlife or vulnerable wildlife
- e. are located within the defined distances stated in the Environmental Offsets Policy 2014 from the defining banks of a relevant watercourse or drainage feature as shown on the vegetation management watercourse and drainage feature map; or
- f. are areas of land determined to be required for ecosystem functioning ('connectivity areas')
- 2. wetlands in a wetland protection area or wetlands of high ecological significance shown on the map of referable wetlands under the Environmental Protection Regulation 2008
- 3. wetlands and watercourses in high ecological value waters as defined in schedule 2 of the Environmental Protection (Water) Policy 2009
- 4. designated precincts in strategic environmental areas under the Regional Planning Interests Regulation 2014
- threatened wildlife under the Nature Conservation Act 1992 and special least concern animals under the Nature Conservation (Wildlife) Regulation 2006
- 6. protected areas under the Nature Conservation Act 1992 excluding coordinated conservation areas
- 7. highly protected zones of state marine parks under the Marine Parks Act 2004
- 8. declared fish habitat areas under the Fisheries Act 1994
- 9. **waterways** that provide for **fish** passage under the *Fisheries Act 1994* if the construction, installation or modification of **waterway barrier works** carried will limit the passage of **fish** along the **waterway**
- 10. marine plants under the Fisheries Act 1994; or
- 11. legally secured offset areas.

#### Offset means environmental offset under the Environmental Offsets Act 2014.

Note: Environmental **offset** means an activity undertaken to counterbalance a **significant residual impact** of a prescribed activity on a **prescribed environmental matter**, delivered in accordance with the Environmental offsets framework, Department of Environment and Heritage Protection, 2014. The **prescribed environmental matters** assessed under the State Development Assessment Provisions are **matters of state environmental significance**.

#### Prescribed environmental matters see the Environmental Offsets Act 2014.

Note: A **prescribed environmental matter** is any species, ecosystem or other similar matter protected under Queensland legislation for which an **offset** may be provided. A **prescribed environmental matter** may be a matter of national, state or local environmental significance, however, assessment criteria in the State Development Assessment Provisions only relate to **matters of state environmental significance**. Each of the **prescribed environmental matters** are listed under the Environmental Offsets Regulation 2014.

#### Significant residual impact see the Environmental offsets Act 2014.

Note: Significant residual impact is an impact, whether direct or indirect, of a prescribed activity on all or part of a prescribed environmental matter that:

- 1. remains, or will or is likely to remain, (whether temporarily or permanently) despite on-site mitigation measures for the prescribed activity
- 2. is, or will or is likely to be, significant.

Guidance for determining if a prescribed activity will have a **significant residual impact** on a **matter of state environmental significance** is provided in the Significant Residual Impact Guideline, Department State Development, Infrastructure and Planning, 2014.

#### Strategic environmental area see the Regional Planning Interests Act 2014.

Note: A strategic environmental area is an area that:

- 1. contains one or more environmental attributes for the area
- 2. is either:
  - a. shown on a map in a regional plan as a strategic environmental area; or
  - b. prescribed under a regulation.

#### **Tidal land** see the *Fisheries Act 1994*.

Note: Tidal land includes reefs, shoals and other land permanently or periodically submerged by waters subject to tidal influence.

#### Waterway see the Fisheries Act 1994.

Note: **Waterway** includes a river, creek, stream, watercourse or inlet of the sea. For further guidance see the fact sheet Maintaining Fish Passage in Queensland: What is a waterway? Department of Agriculture, Fisheries and Forestry, 2014.

#### Waterway barrier works see the Fisheries Act 1994.

Note: **Waterway barrier works** means a dam, weir, or other barrier across a **waterway** if the barrier limits **fish** stock access and movement along a **waterway**. For further guidance see the factsheets Maintaining Fish Passage in Queensland: What is a waterway barrier work?, Department of Agriculture, Fisheries and Forestry, 2014 and Maintaining Fish Passage in Queensland: What is not a waterway barrier work?, Department of Agriculture, Fisheries and Forestry, 2014.
